

SOC Lab: Cyber Threat Analysis Guide

1. Malware Analysis

Sample Details

- SHA256: <hash>
- Source: MalwareBazaar

Detection Summary

Engine	Detection Name
-----	-----
Kaspersky	Trojan.Win32.X
Sophos	Mal/Generic-S
...	...

Behavioral Indicators

- Contacts C2 server: 45.77.x.x
- Drops file: C:\Users\Public\svchost.exe
- Creates registry run key

Potential Impact

- Allows remote access to infected host, possible data exfiltration.

2. Phishing Template (SET)

- Steps taken to create phishing site
 1. Open terminal in Parrot OS/Kali Linux and run 'sudo setoolkit'.
 2. Choose 'Social-Engineering Attacks' > 'Website Attack Vectors' > 'Credential Harvester Attack Method'.
 3. Enter a legitimate site URL (e.g., <https://login.microsoftonline.com>).
 4. Enter your local IP when prompted.
 5. SET hosts a phishing page; test locally and document results.
- Screenshots
- Explanation of what data is collected

3. APT Campaign Mapping (MITRE ATT&CK)

Campaign Stage	MITRE Tactic	Technique ID	Description
Delivery	Initial Access	T1566.001	Spearphishing Attachment
Execution	Command & Control	T1059.001	PowerShell
Persistence	Persistence	T1053.005	Scheduled Task
